

# Enabling Effective Governance for Regional Bioeconomy Blueprints

Strong governance ensures coordinated, transparent, and inclusive management of bioeconomy initiatives. It supports stakeholder alignment, accountability, and strategic coherence.

## – COLLABORATIVE AND INCLUSIVE MULTI-LEVEL GOVERNANCE STRUCTURES

- **Best Practice 1 – Dedicated coordinating bodies to support multi-actor collaboration**  
Establish coordinating hubs like clusters or task forces to manage and steer implementation. Ensure long-term coordination across public-private-academic-civil society actors.
- **Best Practice 2 – Define clear roles and responsibilities across governance levels**  
Co-develop governance frameworks that assign responsibilities at municipal, regional, and national levels. Use co-creation workshops and implementation roadmaps to clarify roles.

## – POLICY ALIGNMENT AND TRANSPARENT GOVERNANCE

- **Best Practice 3 – Align governance with regional, national, and EU frameworks**  
Ensure coherence with broader agendas like the EU Green Deal or Circular Economy Action Plan. Engage in EU platforms (e.g., BIOEAST, CBE JU) for policy consistency and funding access.
- **Best Practice 4 – Establish monitoring and evaluation systems for transparent governance**  
Establish advisory committees and use KPIs to guide adjustments and track progress. Share results publicly to build trust and enable peer learning across regions.

## KEY QUESTIONS FOR PRACTITIONERS

- **How can I** ensure continuity, coordination, and accountability across sectors? Are roles clearly defined, and are institutions equipped to carry them out effectively?
- **How does our** governance framework connect with broader policy objectives at all levels?
- **Are we tracking** the right indicators and sharing information transparently with all stakeholders?
